

# TraceSecurity's Security Awareness Program

**Numerous technologies have been developed and deployed to protect information assets; however, an improperly trained workforce can nullify them all.**

It is critical that an organization's staff understand information security issues and their role in minimizing risk. The TraceSecurity Awareness Program enables organizations to improve their security posture by arming their employees with necessary knowledge to combat security threats.

The **TraceSecurity Security Awareness Program** is a web-based training series based on best practices and security standards. The program is designed to educate employees and influence their behavior by increasing their knowledge of security, helping them better understand potential threats and showing how they can help reduce the risks.

The online Security Training is delivered in a 4 part series. Each training module educates end users on security threats while providing insight on how to avoid falling victim to a situation that could jeopardize an individual or the institution. Each module is delivered in concise segments (approximately 10 minutes each) that minimize impact on employee productivity and increase retention.

A test is included with the program so that once the online training has been completed, administrators can effectively evaluate the users' knowledge of the subject matter.

TraceSecurity's Security Awareness Program is delivered through **TraceTrain**, a specialized module that facilitates the creation and management of a streamlined system to administer all organizational training.

## TOPICS INCLUDE:

### Part I - History of Security and the Transition to Digital

- Security Types
- Modern Threats
- Digital Threats
- Password
- Encryption

### Part 2 - Viruses, Malicious programs and Physical Threats

- Viruses/Trojans/Malware
- Physicals Threats
- Dumpster Diving
- Tailgating/Piggybacking

### Part 3 - Social Engineering

- Workstation Security
- Physical Threats
- Phishing
- Vishing

### Part 4 - Keeping Safe at Work & Home

- Travel & Home Safety
- Portable Devices
- Social Networking
- Identity Theft

## About TraceSecurity

TraceSecurity is a leading provider of cloud based Governance, Risk & Compliance (GRC) and Risk Management services. We help organizations of all sizes achieve, maintain and demonstrate security compliance while significantly improving their security posture. By leveraging these expert services with comprehensive software solutions, TraceSecurity is able to provide customers with integrated and cost-effective solutions that help them maintain an efficient and fully compliant risk management program.
