

TraceTunnel™

Ensure secure encrypted communication.

▶ **Are your current applications exposing your organization?** Chances are your business is running on core systems and other business-enabling solutions that have been implemented and utilized for many years. These applications are stable and perform their specific function on a reliable basis without fail... but are they secure? When traffic travels across your network from workstation to server, the inherent flaw is that if that traffic can be intercepted, you've lost the security game. With TraceTunnel's transparent encryption, you can make sure anything that gets intercepted is useless without the connection-specific decryption code.

Firewalls help you prevent unauthorized communication between sections of your network, but what happens when computers are off of your LAN? TraceTunnel can make sure that traffic is protected as well. TCP traffic such as email, TELNET and standard Web traffic can all be secured. It is also completely customizable so that you can encrypt all traffic or make it specific to certain port traffic.

BUT IS IT SAFE AND SECURE?

With TraceSecurity's TraceTunnel, the answer is unequivocally YES! TraceTunnel enhances the security of your existing solutions by setting up transparent SSL sessions, creating individual one-to-one communication channels between desktops and servers. All information is encrypted and safe while in transit.

KEY BENEFITS

Addresses GLBA and NCUA Regulation Compliance
Appendix A to Part 748
Section 3C 1C page 317
Encryption of electronic member information, including while in transit, to which unauthorized individuals may have access.

Encrypt Outgoing Email Traffic

No longer does your email traffic need to be exposed when you leave the security of your network.

Password Protectable

The connections can be password-dependent to allow the added level of protection of controlling access at an administrator level.

Transparent to End User

TraceTunnel will work in the background silently encrypting critical and private information.

Complete Compatibility

Works with all network environments including Citrix servers and VPN solutions.

Multi-Platform Support

TraceTunnel was developed with non-homogeneous environments in mind so it supports: Windows, AIX, multiple versions of Unix and Linux and Mac OSX.

TraceTunnel is a data encryption tool designed specifically to protect data in transit across a network to ensure secure communication.

TraceTunnel sets up transparent encrypted sessions, creating individual one-to-one communication channels between desktop computers and servers.

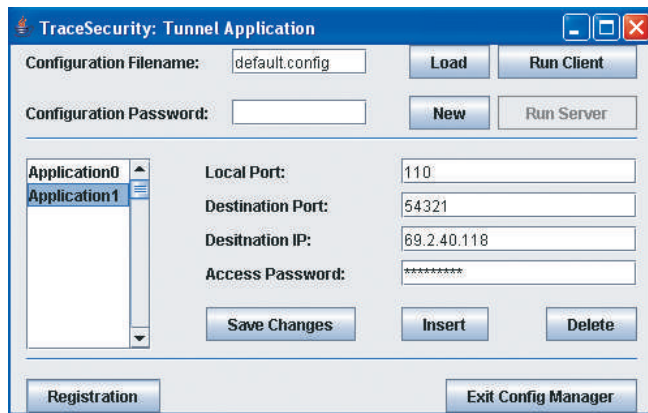

KEY FEATURES

Simple to Implement and Manage

- Setup takes minutes
- No complex key management
- No required devices or fobs
- Transparent operation - no user training required

Secures Communications

- Encrypts TCP/IP service communication
- Only the intended recipient can decipher the information
- Creates individual one-to-one communication channels between desktop computers and servers

Enables Compliance

- Satisfies regulations such as the GLBA and NCUA that require companies to protect their consumers/members from identity theft
- Supports industry security compliance standards for data encryption

Completely Secure and Customizable

- Encrypt all traffic or traffic specific to a certain port
- Password protected

Multi-Platform Support

- Developed with heterogeneous networks in mind
- Supports Windows, AIX, multiple versions of Unix and Linux and Mac OSX

About TraceSecurity

TraceSecurity is a leading provider of security compliance and risk management solutions. The company helps organizations of all sizes to achieve, maintain and demonstrate security compliance while significantly improving their security posture. Key to TraceSecurity's success is the company's comprehensive patent-pending methodology that helps clients address all of the critical components of a successful security compliance program: people, process and technology.

TraceSecurity delivers its solutions through an integrated software-as-a-service platform backed by expert professional services and comprehensive security awareness programs. The company's flagship offering, TraceSecurity Compliance Manager, is the first comprehensive

solution to automate regulatory compliance audits, board-level reporting, policy management, vulnerability assessment, and employee education and testing. The company's expert professional services include onsite risk assessments, security audits, and social engineering. The security awareness programs include an exhaustive set of standard offerings as well as custom-designed courses. With over 500 clients, TraceSecurity supports the risk management and security compliance efforts of organizations in financial services, healthcare, insurance, government and other regulated sectors.
