

Having problems keeping track of who has read the latest changes to your policies? Let TracePolicy help.

TraceSecurity can manage your policies online. As policies are posted, your users are automatically notified. Management can keep track of who has and has not read policies, memos and other electronic information.

TraceSecurity Vulnerability & Compliance Lifecycle

TraceSecurity TracePolicy allows users to easily upload new policies.

Key Features of TracePolicy:

Audit trail to see who has read and accepted policies

Easily post and modify complete policies and memos to an online system for convenience

E-mail notification for new policy publications with a URL link to review the information

Employee acceptance or non-acceptance once the employee has read the document

Daily reminder notifications for those personnel who forget to review the document

Reporting to show management who has read the policies

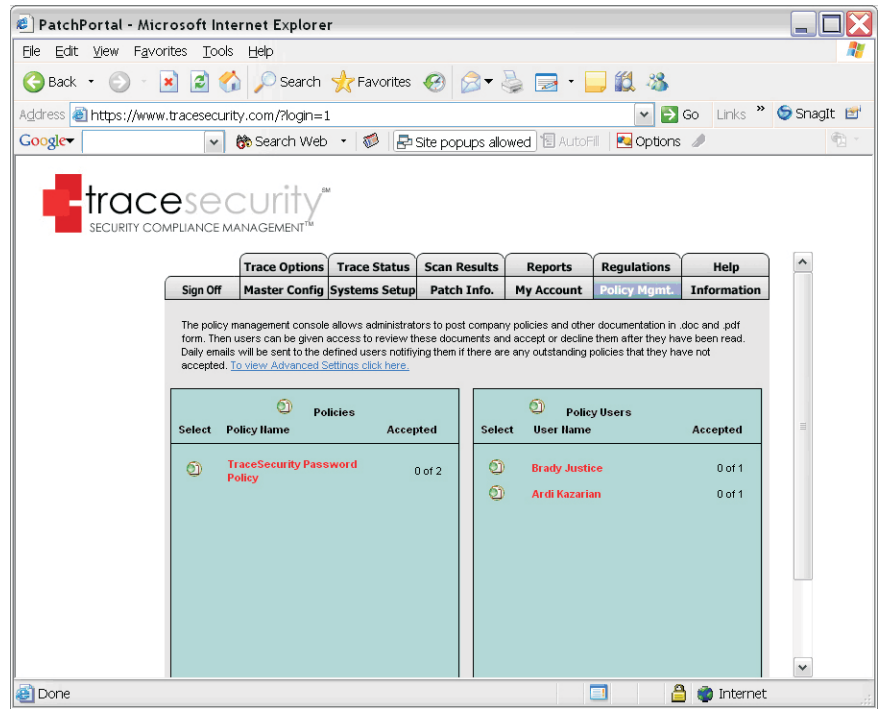

Employee and management grouping to ensure only those documents be sent to those assigned

Post complete policies, changes, memos, warnings, and other information.

The easy-to-use console allows managers to review who has read the documents and who has not.

TracePolicy allows quick policy change notification and user acceptance of these policies.

Employee and management grouping allows for documents to be sent to only those assigned to the document group.

TracePolicy shows users a simplified interface who has and has not accepted new policies.

TraceSecurity TracePolicy offers:

Rapid development and deployment of security policies & procedures by offering pre-defined security templates that can be easily customized to meet your environment. Topics addressed include standard security practices, regulator requirements and audit requirements.

Easy modification and distribution of security policies and procedures. Computer technology is dynamic and always changing hence your policies must adapt to ensure a secure networking environment.

Enforcement of policy acceptance or denial when a policy is added or existing policy changed. With the TracePolicy audit trail, organizations will know exactly who has accepted or declined a new policy.
