ADA Website Compliance Assessment DATASHEET

ADA Compliance Regulations

Our ADA Website Compliance Assessment evaluates your site against section 508 and Web Content Accessibility Guidelines (WCAG) levels A and AA utilizing the Voluntary Product Accessibility Template. This assessment is a combination of automated tools and some manual testing to identify areas that lack accessibility features. We then provide a report and make recommendations so you can take practical steps in making your website ADA complaint.

Next steps could include things like adding alt text to images on your website, adding closed captioning to all videos, and ensuring all text can be read by a screen reader. Fonts must be in sharp contrast from background colors and be able to be resized without loss of functionality. Most things that will make your website ADA compliant are easy to implement, and can be vital to your organization avoiding lawsuits.

Our Approach

Our ADA Website Compliance Assessment evaluates your site against section 508 and Web Content Accessibility Guidelines (WCAG) levels A and AA utilizing the Voluntary Product Accessibility Template. This assessment is a combination of automated tools and some manual testing to identify areas that lack accessibility features. We then provide a report and make recommendations so you can take practical steps in making your website ADA complaint.

Next steps could include things like adding alt text to images on your website, adding closed captioning to all videos, and ensuring all text can be read by a screen reader. Fonts must be in sharp contrast from background colors and be able to be resized without loss of functionality. Most things that will make your website ADA compliant are easy to implement, and can be vital to your organization avoiding lawsuits.

What You Need for ADA Website Compliance:

- ✓ **Alt text on all images, must be readable by a screen reader**
- ✓ **Closed captioning on all videos, including non-audible information conveyed on the video**
- ✓ **Text transcripts beneath all video-only files**
- ✓ **Keyboard accessibility**
- ✓ **Fonts must contract with background and be scalable**
- ✓ **No time limits on website access**
- ✓ **And more!**

Frequently Asked Questions

Can you perform this assessment on websites with user login capabilities?

Yes. We can perform this service for both websites that just display information or web apps where users interact with the website.

How do you price this assessment?

This assessment is priced per web page.

How do I get my results?

We use the Voluntary Product Accessibility Template (VPAT) to deliver the results of the report.

Is this just an automated test against our website?

No. We use both automated and manual testing methods.
