

Firewall Configuration Review

DATASHEET

Is Your Front Door Locked?

Firewalls are like the front door to your organization's network. It's your first line of defense against unauthorized users, and must be strong and secure to keep them out. Attackers are finding new and innovative ways to steal data, and you need to protect your sensitive company information by implementing secure configurations.

Typically, firewall manufacturers provide best practices or hardening guidelines to assist you in maintaining the strength of your firewalls. But even if you implement these updates, the only way to truly know if your firewalls are properly protecting you is through a comprehensive review of the configurations.

Even if a third party manages your firewalls, it is considered best practice to have your firewall configurations reviewed by a third party at least once per year. We will work with your network vendor to complete the review and ensure that your firewalls are securely configured.

Stay Secure

Our Firewall Configuration Review is a thorough assessment of your firewall configurations to ensure that they are securing your business network. We will review your firewall configurations and compare them to the hardening guidelines for your specific firewall as well as compare them against other best practices and standards. Items that will be reviewed include default accounts, clock synchronization, account login timeouts, account lockout thresholds, IPS/IDS rules, port forwarding rules, access control lists, and much more.

Once we complete the review, you'll receive a comprehensive report that includes the details of the engagement, the results of the review, and actionable recommendations on how to better secure your firewalls, if necessary.

We want to help you reduce the overall likelihood of a successful attack and that is why it's imperative that your network and security defenses be ready to withstand modern hacking attempts. Your firewalls are the gatekeepers of your networks, so make sure you're not leaving your front door unlocked.

Firewall Configuration Review Includes:

- ✓ **Firewall/Device Identification**
- ✓ **Best Practices and Hardening Guidelines Review**
- ✓ **Firewall Configuration Review**
- ✓ **Comprehensive Report with Recommendations for Improvement**

Frequently Asked Questions

Is there a maximum number of firewalls that can be included in this review?

Our firewall configuration review encompasses the testing of one firewall.

How is this review priced?

This service is priced per firewall. Separate services are needed for multiple firewalls.

What is the analyst looking for during the review?

The analyst will review the firewall against best practice configurations as well as identify all ingress and egress connections.

What if my firewall is managed by a third party vendor?

No problem, we can work with your third party vendor to perform the review.

How often should we have a firewall configuration review performed?

It is best practice to have a firewall configuration review once per year, or any time the firewall goes through a significant change.
