

Ransomware Preparedness Assessment

Put Ransomware Defenses to the Test

Ransomware attacks continue to hurt business worldwide, gaining footholds through social engineering, password attacks, network intrusion, and more. Once files and systems are locked down by a bad actor, it can be extremely difficult and costly to get things back in order.

When it comes to ransomware, do you know how well your organization and employees would hold up against an attack?

➔ Our Approach

Document Review: Artifacts and documents related to ransomware controls

Control Analysis: Review implementation status of controls and how well they are protecting you

External Network Testing: Scanning and manual testing on external vulnerabilities

Email Testing: Simulated phishing tests against your perimeter controls

Comprehensive Reporting: Prioritized findings and actionable recommendations for improvement

➔ Our RPA Gives You:

- Verification of backups
- Assessment of controls
- Defense testing
- Control deficiency reporting
