

Penetration Testing

Our Approach

TraceSecurity utilizes a wide variety of real-world tactics and techniques to manually test your networks for exploitable vulnerabilities. Our information security analysts have the experience and certifications to put your systems to the test and provide actionable recommendations for improved security.

Penetration Testing Services

External Penetration Testing

Examine the security of your network's perimeter with simulated attacks using real-world tools and techniques.

Internal Penetration Testing

Make sure your internal systems are properly segregated and configured to handle internal attacks.

Wireless Penetration Testing

Whether available for public use or only used internally, make sure your wireless networks are secure from attack.

Web Application Testing

Test the security of web applications and the necessary connections to your other technologies.

Mobile Application Testing

Confirm that mobile apps are secure with penetration testing and API configuration reviews.

PCI DSS Penetration Testing

Ensure the security of your payment card transactions in line with PCI DSS compliance requirements.
