

PURPLE TEAM TESTING

Put your security investments to the test

Red Team + Blue Team

Our Red Team of information security analysts works with your Blue Team of IT staff to test your networks based on the MITRE ATT&CK framework. Using the prescribed Tactics, Techniques, and Procedures (TTPs), our analysts perform exploits against your systems to make sure logging and monitoring solutions are catching the activity.

Ride Along Testing

The best version of a Purple Team Test involves real-time collaboration between our Red Team and your Blue Team. Working together, our analysts can attempt exploits on areas of your networks and systems while you monitor IDS/IPS, SIEMs, and Endpoint Protection solutions to confirm alerts are triggering as expected.

Our Approach

Collaborative Testing

Our Red Team performs testing while your Blue Team monitors systems and logs to track testing in real time.

Validation of IT Investments

Confirm that logging and monitoring capabilities are properly working to block, alert, and view network activity.

Configuration Improvements

Our analysts provide recommendations to improve security configurations for logging and monitoring.
